***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a method for forming anti-glare pixel-defining layers on an OLED panel, classified in class 445, subclass 24.
- II. Claims 13-21, drawn to an OLED panel, classified in class 313, subclass 505.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the plurality of first electrodes can first be formed on a sacrificial substrate and then the plurality of first electrodes can be fastened to the substrate (non-sacrificial), in addition the first electrodes could also be patterned on the sacrificial substrate before attaching them to the substrate (non-sacrificial). Next the sacrificial substrate can be dissolved away.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Richard E. Fichter on May 6, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2879

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
